

Our Results-Driven, Testing Culture: How It Adversely Affects Students Personal Experience

Lyn Lesch advocates that learning cannot be measured by empirical results like testing and grading. As the founder of Chicagos The Childrens School, Lesch didnt give grades or submit students to standardized testing?such conditions may seem blasphemous to most educators, but the results spoke for themselves. Without the high-stakes pressure of results, accountability, and testing, students were able to take a more active role in their education. With reduced stress on performance, students can develop an openness to the material and link learning to their own personal experience.If the status quo goes unchanged, Lesch argues that students will be schooled in a disembodied, dull manner that prevents true learning and comprehension. To avoid this, Lesch describes how education should revolve around each students personal experience (i.e., linking school with what matters to individual students). Perhaps more than anything, this book is intended to be a discussion point for developing a healthy relationship between personal experience and academic learning.
